The cylinder that is at TDC of the exhaust stroke is called the waste cylinder. When the coil is triggered both companion cylinder spark plugs fire at the same time, completing a series circuit. Because the lower pressure inside the waste cylinder offers very little resistance, the event cylinder uses most of the available voltage to produce a very high energy spark.

I am not sure where you are getting your information from. Sounds like you better stick with the Series II 3800. There is no doubt that the Series II has a super strong bottom end. Capable of 500 hp without breaking a sweat. However the engineers called it quits after building a strong bottom end and did a half ass job on the cylinder heads.
