Growing native garden foods is just another way of supporting wild flora and fauna, as well as putting diversity in your diet. There are a host of native plants you can eat, varieties that naturally occur where you live and will thrive with just minimum care.

Gardening With Native Edibles: Native Plants You Can Eat ...

Native plants are adapted to the local climate and soil conditions where they naturally occur. These important plant species provide nectar, pollen, and seeds that serve as food for native butterflies, insects, birds and other animals. Unlike natives, common horticultural plants do not provide energetic rewards for their visitors and often require insect pest control to survive.

Gardening with Native Plants of the Pacific Northwest

Another consideration is that a native plant garden reduces noise pollution from mowers, blowers, and trimmers. Site your native plant in a spot that provides the conditions it prefers — soil type, water amounts, sun, or shade — and it will thrive. It is always important, however, to remember the mantra, “Right plant, right place.”
