Solution. Suppose the adjacency matrices of two graphs G and H are equal. Let the ordering of the vertices in the adjacency matrices of G and H be (u_1, u_2, \dots, u_n) and (v_1, v_2, \dots, v_n) respectively. Let f be a mapping from $V(G)$ to $V(H)$ such that $f(u_i) = v_i$ for all $i = 1, 2, \dots, n$.

Graph Theory - Examples - Tutorialspoint

this is a short, elementary introduction to graph theory, the content is fine, but I found a lot of passages extremely talkative and pointless, for example, at the end of the "euler's formula" section, there is a 5 page section telling topology jokes, explaining what high school algebra is, mentioning roman numerals, and name dropping descartes.
