Liquefied Natural Gas Developing And

Natural gas is the only fossil fuel with a growing share of global energy, and natural gas is poised to replace oil as the leading fuel in U.S. energy consumption within five years. BP forecasts that, by 2035, oil will account for 30 % of U.S. energy consumption, and natural gas for 39%.

Liquefied Natural Gas Developments and Market Impacts

The liquefied natural gas (LNG) industry is experiencing low prices and oversupply. Even before the COVID-19 pandemic, the LNG market was set for oversupply in 2020 and 2021 as new projects continued to grow capacity well beyond steady demand growth. Reduced gas demand because of the pandemic has added to excess supply, creating market volatility.

The future of liquefied natural gas: Opportunities for ...

Liquefied natural gas (LNG) is natural gas (predominantly methane, CH₄, with some mixture of ethane, C₂H₆) that has been cooled down to liquid form for ease and safety of non-pressurized storage or transport. It takes up about 1/600th the volume of natural gas in the gaseous state (at standard conditions for temperature and pressure). It is odorless, colorless, non-toxic and non-corrosive.
