Data analysis is a process of inspecting, cleansing, transforming, and modeling data with the goal of discovering useful information, informing conclusions, and supporting decision-making. Data analysis has multiple facets and approaches, encompassing diverse techniques under a variety of names, and is used in different business, science, and social science domains.

Data analysis - Wikipedia

A meta-analysis was conducted if adequate data was available from 2 or more studies and where statistical and clinical heterogeneity among studies was not an issue. Otherwise, a qualitative review was completed. The GRADE system was used to summarize the quality of the body of evidence comprised of 1 or more studies.

Air cleaning technologies: an evidence-based analysis

Air conditioning (also A/C, air conditioner) is the process of removing heat and controlling the humidity (as well as removing dust in some cases) of the air within a building or vehicle, in order to achieve a more comfortable interior environment. This may be achieved using powered devices ('air conditioners'), by passive cooling or by ventilative cooling.
