Inverse trigonometric functions are simply defined as the inverse functions of the basic trigonometric functions which are sine, cosine, tangent, cotangent, secant, and cosecant functions. They are also termed as arcus functions, antitrigonometric functions or cyclometric functions. These inverse functions in trigonometry are used to get the angle with any of the trigonometry ratios.

Inverse Trigonometric Functions: •The domains of the trigonometric functions are restricted so that

they become one-to-one and their inverse can be determined. •Since the definition of an inverse function says that $f^{-1}(x)=y \Rightarrow f(y)=x$ We have the inverse sine function, $\sin^{-1} x = y - \pi \Rightarrow \sin y = x$ and $\pi/2 \leq y \leq 3\pi/2$

Inverse Trigonometric Functions

Notation. Several notations for the inverse trigonometric functions exist. The most common convention is to name inverse trigonometric functions using an arc- prefix: $\arcsin(x)$, $\arccos(x)$, $\arctan(x)$, etc. (This convention is used throughout this article.) This notation arises from the following geometric relationships: [citation needed] When measuring in radians, an angle of θ radians will ...

Do you know which equations are called Trigonometric Equations? Well, the equations which involve trigonometric functions like \sin , \cos , \tan , \cot , \sec etc. are called trigonometric equations. In this article, we will look at the different solutions of trigonometric equations in detail.

Trigonometric Equations: General & Principal Solutions ...

The range of $y = \operatorname{arcsec} x$. In calculus, $\sin^{-1} x$, $\tan^{-1} x$, and $\cos^{-1} x$ are the most important inverse trigonometric functions. Nevertheless, here are the ranges that make the rest single-valued. If x is positive, then the value of the inverse function is always a first quadrant angle, or 0. If x is negative, the value of the inverse will fall in the quadrant in which the direct ...

Inverse trigonometric functions - Topics in trigonometry

Trigonometry is a measurement of triangle and it is included with inverse functions. There are six basic inverse trigonometric functions: arcsine, arccosine, arctangent, arccotangent, arcsecant, and arccosecant. In this article, we will illustrate about the topic of inverse trigonometric functions along with JEE previous year some problems.

JEE Inverse Trig Functions Previous Year Questions With ...

To find solutions to a trigonometric equation start by taking the inverse trig function (like inverse \sin , inverse cosine, inverse tangent) of both sides of the equation and then set up reference angles to find the rest of the answers. This inverse method gives the one answer on the interval for which each inverse trigonometric function is defined: For $\sin^{-1} \rightarrow [-\pi/2, \pi/2]$ For $\cos^{-1} \rightarrow [0 \dots$

How do you use inverse trigonometric functions to find the ...

Inverse Trig Functions. One of the more common notations for inverse trig functions can be very confusing. First, regardless of how you are used to dealing with exponentiation we tend to denote an inverse trig function with an "exponent" of "-1". In other words, the inverse cosine is denoted as $\{\cos^{-1}\}(x)$.
